

**AllDown
an Environmentally
Friendly, Organic Weed
Solution**

Test cases with **AllDown™** indicate applications reduce the growth of noxious weeds. Early applications help knock down weeds effectively. **All-Down Green Chemistry Herbicide®** is a fast acting non-selective product for burn-down of unwanted top growth foliage. The ingredients work rapidly, providing fast desiccation and control of unwanted broadleaf weeds and grasses.

AllDown™ is safe to use around children and pets.

AllDown™ is manufactured by Summerset

Soil & Plant Enhancement

- Saves water by improving water penetration and root zone development.
- Increases speed of breakdown of biodegradable chemicals in soil.
- Improves digestion of thatch layer.
- Creates a safer, less polluted environment.
- Reduces the need for fungicides and herbicides.
- Reduces weed pressure due to improved nutrient balance, reduction of anaerobic black layer, and improved oxygen-carbon dioxide levels in the soil.

Water Reclamation for treatment of algae, anaerobic activity, odor and sludge remediation in lakes, ponds & wetlands is also available.

Water reclamation is administered using biologically balanced products and does not pollute or harm the environment.

Recommended Soil Application

Apply 1 to 2 Quarts per 1000 sq. ft. (depending on the soil conditions). Clay and compacted soils may require heavier application rates. Apply in early spring and throughout the season to maximize soil restoration and root development.

BioLynceus provides on-site review of your projects. Please call us to establish a time for our specialist to visit with you about your turf, weed control, and water or soil remediation.
