RE: Microbes and Enzymes Injection

Dear Mr. Allen:

In September of 2001 San Juan Refining Company began injecting a special blend of microbes and enzymes into our three aeration lagoons to reduce sludge. The injection point was installed at the beginning of the Waste Water Treatment Unit.

In February of this year we performed a sludge judge on each of the three aeration lagoons and discovered that we have decreased the sludge level in each pond significantly. In some areas the sludge has decreased three to four feet. The success of injecting the microbes and enzymes to decrease sludge levels has exceeded or expectations. As a result we will not have to shut down the wastewater treatment unit to clean and dispose of sludge that has accumulated in the three aerations lagoons.

The refinery has saved a tremendous amount not only in money but also in down time. If you would like to discuss our treatment methods, please feel free to contact me at (505)-632-4168.

Sincerely:

A handwritten signature in black ink that reads "Barry G. Holman". The signature is written in a cursive style with a large initial "B" and a long horizontal stroke at the end.
