BioScrubbers remove sludge

Sludge build-up in your septic system can cost pennies today or dollars tomorrow.

BioScrubber™ Septic Tank Treatment

The addition of liquid BioScrubber™ reduces sludge by improving the microbial activities in the septic system.

BioScrubber is distributed by BioLynceus Biological Solutions

BioScrubber™ Septic Tank Treatment

BioScrubber™ is produced through a proprietary process. BioScrubber™ contains diverse microbiology designed to activate digestion of solid waste.

Septic System Care and Maintenance

Conventional septic systems are not maintenance or care free. The undigested solids (sludge) in the bottom of the septic tank should be treated regularly to keep the system healthy and vital.

Systems that build-up a heavy deposit of sludge are destined for being pumped, depending on usage and tank size.

If the sludge is not removed periodically, it will eventually carry over into the leach field and cause the field to fail.

Benefits of BioScrubber™

- Faster waste digestion
- Substantially reduces septic tank pumping
- Easy to use/no need for special equipment
- Septic system becomes biologically healthy
- Microbial action is increased
- Environmentally safe
- Effective on human waste treatment
- Effective in septic systems
- Accelerates decomposition of solids
- Positive effects on leaching discharge and leach fields
